1 What is xSub?

xSub /cross-sub.org/ is a repository of micro-level, subnational event data on armed conflict and political violence around the world. Our goal is to preserve and consolidate multiple open-source data collections in one comprehensive electronic archive, creating a “database of databases” for purposes of research, education, policy-making and evaluation. The archive currently includes data on violence and protests from 139 countries (1942-2016), from 21 data sources, including both large data collections and individual scholars. To facilitate comparisons across countries and sources, **xSub** organizes these data into common units of analysis, by space (country, province, district, grid cell, electoral constituency) and time (year, month, week). The data are available to download, at no cost, from the data page.

2 Why xSub?

Traditionally, research on civil conflict has maintained a cross-national focus, tracking macro-level trends across states, but overlooking variation within them. A growing movement in sub-national research has disaggregated actors and actions to a more granular local level, but mostly within a single country or conflict. With few attempts to generalize beyond the idiosyncrasies of an individual case, subnational conflict research has produced a series of contradictory findings, impeding the accumulation of knowledge. As a result, social scientists have been unable to answer the kinds of questions that activists, policymakers and ordinary citizens care about most, such as when and where violence is likely to occur, how it are likely to unfold, and – importantly – whether the lessons of previous conflicts apply to new ones. Our aim is to eliminate the disaggregation-generalizability tradeoff and enable a more theoretically comprehensive and rigorous approach to this field of research, by developing a unified platform for **Cross-National Data on Sub-National Violence (xSub)**.

To a greater extent than macro-level work, disaggregated, sub-national research on civil conflict has faced steep problems of external validity, perpetuating disagreements over how idiosyncratic these findings really are. The discovery of a positive relationship between, say, repression and dissent in country A is not evidence of a similar relationship in country B, yet most sub-national analyses stop at the borders of country A, without attempting to validate results with data from other conflicts. Also unknown is how robust empirical results are across sources and measurement strategies – whether media-generated data agree with archival sources, or whether manually-classified event reports tell the same story as data collected with automated techniques, like natural language processing and machine learning.

The chief barrier to generalizability is not a lack of data on violence or covariates in country B – in many cases these data already exist and are in the public domain. The problem is that no one has yet undertaken the entrepreneurial effort to merge and combine these disparate sub-national conflict datasets into a unified, analysis-ready format, with consistent theoretical constructs, definitions, measurement and levels of analysis. Without such an effort, the field cannot move forward.

xSub addresses this problem explicitly. xSub is a web-based program that pulls together

dozens of existing sub-national databases, and aggregates the relevant conflict events and covariates to consistent units of analysis across countries and conflicts. As a public good, xSub will significantly reduce the barriers to comparative sub-national research, empowering researchers to better situate their theoretical investigations and quickly construct custom, analysis-ready datasets. Similar initiatives have long existed for macro-level cross-national conflict data, most notably the [EUGene software](#) by Bennett and Stam. No resource of this kind currently exists for sub-national conflict data.

3 How to Use xSub

xSub /cross-sub.org/ is a repository of micro-level, subnational event data on armed conflict and political violence around the world.

Through the online interface, users select:

1. a country and data source, in either order.
2. a unit of analysis
 - space: country / province / district / grid / electoral constituency
 - time: year / month / week

The website then generates a compressed archive with:

1. dataset
 - file format: comma-separated values delimited text file (.csv)
 - data structure: cross-sectional time-series
 - number of observations: $N \times T$, where N is the number of spatial units (e.g. districts, grid cells), and T is the number of time units (e.g. months, weeks)
 - variables included: unit IDs, violence event counts (broken down by actors and tactics), covariates (local demographics, geography, ethnicity, weather)
2. map and time plot of violence
 - file format: portable network graphics (.png)
 - map: number of violent events per spatial units (darker shade = more violence)
 - time plot: number of violent events per time unit (higher bars = more violence)
3. codebook
 - file format: portable document format (.pdf)
 - contents: information on variable names, data structure

4. actor dictionary

- file format: portable document format (.pdf)
- contents: information on which specific actors are classified as “government,” “rebel,” and other categories in the file

4 Sources

The current **xSub** release features data on 139 countries from 21 sources, including

6 Our Team

Yuri M. Zhukov is co-director of xSub. He is an Assistant Professor of Political Science at the University of Michigan, Ann Arbor, and a Faculty Associate with the Center for Political Studies at the Institute for Social Research.

Website: sites.lsa.umich.edu/zhukov

Christian Davenport is co-director of xSub. He is a Professor of Political Science at the University of Michigan, Ann Arbor, and a Faculty Associate with the Center for Political Studies at the Institute for Social Research.

Website: christiandavenportphd.weebly.com

Nadiya Kostyuk is xSub's chief data scientist. She is a doctoral candidate in Political Science and Public Policy at the University of Michigan, and (in 2017-2018) a pre-doctoral fellow with the Belfer Center for Science and International Affairs at Harvard's Kennedy School.

Website: lsa.umich.edu/polisci/people/graduate-students/nadiya.html

Yioryos Nardis is xSub's program manager. He is a Senior Research Specialist with the Center for Political Studies at the Institute for Social Research.

Website: isr.umich.edu/cps/people_staff_yioryos.html

Andrew Versalle is xSub's chief web developer. He is a software engineer based in Ypsilanti, MI.

Website: andrewversalle.com

7 Units of Analysis

xSub datasets are available at multiple levels of analysis, which users can customize to their needs. The spatio-temporal resolution of the panel data can thus range from macro-level (e.g. country-year) to meso-level (e.g. province-month) and micro-level (e.g. grid-week).

Spatial units:

- `country [adm0]`: country or national level
- `province [adm1]`: 1st order administrative division (e.g. U.S. state)
- `district [adm2]`: 2nd order administrative division (e.g. U.S. county)
- `grid cell [priogrid]`: 0.5 x 0.5 decimal degree regular grid (PRIO-GRID)
- `electoral constituency [clea]`: geographic units used by the Constituency-Level Elections Archive (CLEA)

Temporal units:

- `year`
- `month`

- week

Output datasets feature violent event counts and local demographic, geographic, ethnic and weather variables, aggregated to the user’s preferred units. For example, if the user selects “Space: district” and “Time: week”, the dataset will include repeated weekly observations for each district, with the total number of violent incidents at each time period (broken down by actor and tactics), and local average statistics for weather and other covariates.

8 Variables Included

xSub datasets include variables from two categories:

1. conflict and violence
2. local demographics, geography, ethnicity, weather

8.1 ID variables

The following variables identify spatial and temporal units, and can be used for merging and aggregation:

- ID_0: GADM country ID (numeric)
- ISO: ISO3 country ID (string)
- NAME_0: country name (string)
- ID_1: GADM province ID (numeric)
- NAME_1: province name (string)
- ID_2: GADM district ID (numeric)
- NAME_2: district name (string)
- CLEA_CST: electoral constituency ID / format is “A.B.C”, where A is the CLEA country code, B is the election year, C is the CLEA constituency number (string)
- CLEA_CST_N: name of electoral constituency (string)
- PRIO_GID: PRIO-GRID cell ID (numeric)
- PRIO_XCOORD: longitude of cell centroid (numeric)
- PRIO_YCOORD: latitude of cell centroid (numeric)
- PRIO_COL: PRIO-GRID column number (numeric)

- **PRIO_ROW**: PRIO-GRID row number (numeric)
- **YEAR**: year (numeric)
- **YRMO**: year-month (YYYYMM) (numeric)
- **WID**: week ID (numeric)
- **DATE**: date (YYYYMMDD) (numeric)

8.2 Event counts: conflict and political violence

- **INITIATOR** variables:
 - **INITIATOR_SIDEA**, **INITIATOR_SIDEB**, **INITIATOR_SIDE_C**, **INITIATOR_SIDE_D**
- **TARGET** variables:
 - **TARGET_SIDEA**, **TARGET_SIDEB**, **TARGET_SIDE_C**, **TARGET_SIDE_D**
- **ACTION** variables:
 - **ACTION_ANY**, **ACTION_IND**, **ACTION_SEL**, **ACTION_PRT**
- **INITIATOR_ACTION** variables:
 - **SIDEA_ANY**, **SIDEA_IND**, **SIDEA_SEL**, **SIDEA_PRT**
SIDEB_ANY, **SIDEB_IND**, **SIDEB_SEL**, **SIDEB_PRT**
SIDE_C_ANY, **SIDE_C_IND**, **SIDE_C_SEL**, **SIDE_C_PRT**

INITIATOR, TARGET

- **SIDE_A**: incumbent government, pro-govt militia, third party acting on incumbent's behalf
- **SIDE_B**: rebels, anti-government militia, third party acting on rebels' behalf, and other armed groups directly challenging the government
- **SIDE_C**: civilians
- **SIDE_D**: local militia, tribe, other non-state actors *not* directly challenging the government

The **actor dictionary** specifies which factions belong to **SIDE_A** . . . **SIDE_D** for each conflict.

ACTION

General categories

- ANY: any use of force
- IND: indiscriminate force (e.g. indirect fire, shelling, air strikes, chemical weapons)
- SEL: selective force (e.g. direct fire, arrest, assassination)
- PRT: protest

8.3 Local demographics, geography, ethnicity, weather

- POP_1990: population per square kilometer, 1990 ([GPW v3](#)) (numeric)
- POP_1995: population per square kilometer, 1995 ([GPW v3](#)) (numeric)
- POP_2000: population per square kilometer, 2000 ([GPW v3](#)) (numeric)
- ELEV_MEAN: average elevation, meters ([ETOPO05](#)) (numeric)
- ELEV_SD: standard deviation of elevation, meters ([ETOPO05](#)) (numeric)
- ELEV_MAX: maximum elevation, meters ([ETOPO05](#)) (numeric)
- OPEN_TERRAIN: proportion of land covered by open terrain (shrublands, savannah, grasslands, barren or sparsely vegetated) ([GLCC](#)) (numeric)
- FOREST: proportion of land covered by evergreen, deciduous or mixed forest ([GLCC](#)) (numeric)
- WETLAND: proportion of land covered by wetlands or water bodies ([GLCC](#)) (numeric)
- FARMLAND: proportion of land covered by croplands ([GLCC](#)) (numeric)
- GREG_NGROUPS: number of local ethnic groups ([GREG](#)) (numeric)
- GREG_GROUPS: names of local ethnic groups ([GREG](#)) (string)
- WLMS_NLANG: number of local languages ([WLMS](#)) (numeric)
- WLMS_LANGS: names of local languages ([WLMS](#)) (string)
- NBUILTUP: number of built-up areas ([GGIS](#)) (numeric)
- BUILTUP: names of built-up areas ([GGIS](#)) (string)
- NPETRO: number of petroleum fields ([PRIO](#)) (numeric)

- PETRO: names of petroleum fields ([PRIO](#)) (string)
- DIST2PROVCAP: distance to nearest provincial capital, km ([GGIS](#)) (numeric)
- DIST2CAP: distance to national capital, km ([GGIS](#)) (numeric)
- ROAD_XING: number of primary, secondary roads crossing border ([DCW](#)) (numeric)
- ROAD_LENGTH: length of primary, secondary roads, km ([DCW](#)) (numeric)
- AREA_KM2: area of spatial unit, km² (numeric)
- ROAD_DENSITY: road density, km/km² ([DCW](#)) (numeric)
- TEMP: average temperature in Celsius ([NOAA](#)) (numeric)
- RAIN: average precipitation in millimeters ([NOAA](#)) (numeric)

9 GIS Compatibility

xSub datasets are designed for compatibility with Geographic Information Systems (GIS). Each file contains a spatial unit ID that can be used to merge the event data to GIS spatial geometry files, like ESRI polygon shapefiles (.shp), and R SpatialPolygons (.RData).

Spatial Unit	Type	Merge Variables	Link to GIS Files
country [adm0]	Global Administrative Areas	ID_0, NAME_0	gadm.org
province [adm1]	Global Administrative Areas	ID_1, NAME_2	gadm.org
district [adm2]	Global Administrative Areas	ID_2, NAME_2	gadm.org
grid [priogrid]	PRIO Grid	PRIO_GID, PRIO_COL, PRIO_ROW	grid.prio.org
constituency [clea]	CLEA polygons	CLEA_CST_N, CLEA_CST	electiondataarchive.org

10 XSub Data in Detail

Table 1 provides information on each country included in xSub. It includes information on data sources, the number of reported violent events in each source, the time period covered, the actors included, and the most detailed spatio-temporal levels of analysis available.

Table 1: XSUB DATA IN DETAILS
