1 What is xSub?

xSub /cross-sub.org/ is a repository of micro-level, subnational event data on armed conflict and political violence around the world. Our goal is to preserve and consolidate multiple open-source data collections in one comprehensive electronic archive, creating a “database of databases” for purposes of research, education, policy-making and evaluation. The archive currently includes data on violence and protests from 156 countries (1942-2016), from 21 data sources, including both large data collections and individual scholars. To facilitate comparisons across countries and sources, **xSub** organizes these data into common units of analysis, by space (country, province, district, grid cell, electoral constituency) and time (year, month, week, day). The data are available to download, at no cost, from the data page.

2 Why xSub?

Traditionally, research on civil conflict has maintained a cross-national focus, tracking macro-level trends across states, but overlooking variation within them. A growing movement in sub-national research has disaggregated actors and actions to a more granular local level, but mostly within a single country or conflict. With few attempts to generalize beyond the idiosyncrasies of an individual case, subnational conflict research has produced a series of contradictory findings, impeding the accumulation of knowledge. As a result, social scientists have been unable to answer the kinds of questions that activists, policymakers and ordinary citizens care about most, such as when and where violence is likely to occur, how it are likely to unfold, and – importantly – whether the lessons of previous conflicts apply to new ones. Our aim is to eliminate the disaggregation-generalizability tradeoff and enable a more theoretically comprehensive and rigorous approach to this field of research, by developing a unified platform for **Cross-National Data on Sub-National Violence (xSub)**.

To a greater extent than macro-level work, disaggregated, sub-national research on civil conflict has faced steep problems of external validity, perpetuating disagreements over how idiosyncratic these findings really are. The discovery of a positive relationship between, say, repression and dissent in country A is not evidence of a similar relationship in country B, yet most sub-national analyses stop at the borders of country A, without attempting to validate results with data from other conflicts. Also unknown is how robust empirical results are across sources and measurement strategies – whether media-generated data agree with archival sources, or whether manually-classified event reports tell the same story as data collected with automated techniques, like natural language processing and machine learning.

The chief barrier to generalizability is not a lack of data on violence or covariates in country B – in many cases these data already exist and are in the public domain. The problem is that no one has yet undertaken the entrepreneurial effort to merge and combine these disparate sub-national conflict datasets into a unified, analysis-ready format, with consistent theoretical constructs, definitions, measurement and levels of analysis. Without such an effort, the field cannot move forward.

xSub addresses this problem explicitly. xSub is a web-based program that pulls together dozens of existing sub-national databases, and aggregates the relevant conflict events and covariates to consistent units of analysis across countries and conflicts. As a public good, xSub will significantly reduce the barriers to comparative sub-national research, empowering researchers to better situate their theoretical investigations and quickly construct custom, analysis-ready datasets. Similar initiatives have long existed for macro-level cross-national conflict data, most notably the [EUGene software](#) by Bennett and Stam. No resource of this kind currently exists for sub-national conflict data.

3 How to Use **xSub**

xSub /cross-sub.org/ is a repository of micro-level, subnational event data on armed conflict and political violence around the world.

Through the online interface, users select:

1. a country and data source, in either order.
2. a unit of analysis
 - space: country / province / district / grid / electoral constituency
 - time: year / month / week / day

The website then generates a compressed archive with:

1. dataset
 - file format: comma-separated values delimited text file (.csv)
 - data structure: cross-sectional time-series
 - number of observations: $N \times T$, where N is the number of spatial units (e.g. districts, grid cells), and T is the number of time units (e.g. months, weeks)
 - variables included: unit IDs, violence event counts (broken down by actors and tactics), covariates (local demographics, geography, ethnicity, weather)
2. map and time plot of violence
 - file format: portable network graphics (.png)
 - map: number of violent events per spatial units (darker shade = more violence)
 - time plot: number of violent events per time unit (higher bars = more violence)
3. codebook
 - file format: portable document format (.pdf)

- contents: information on variable names, data structure
4. actor dictionary
- file format: portable document format (.pdf)
 - contents: information on which specific actors are classified as “government,” “rebel,” and other categories in the file

5 Multiple Source Data (MELTT)

In addition to the data collections above, xSub features several pooled, multiple-source datasets, integrated and disambiguated with the [MELTT](#) software package. These datasets combine events from our 21 collections, helping to offset under-reporting in each source with information from another. For details about MELTT’s underlying methodology, please see

- Donnay, Karsten, Eric Dunford, Erin C. McGrath, David Backer and David E. Cunningham, “Integrating Conflict Event Data,” *Journal of Conflict Resolution* (forthcoming, 2018). <https://doi.org/10.1177/0022002718777050>

We currently provide 8 sets of integrated data, organized by the spatial, temporal and event taxonomy filters used to remove duplicate events:

- Spatial filter (which events are ‘co-located’):
 - 1 km: contemporaneous events located within a 1 km radius of each other count as a single event
 - 5 km: contemporaneous events located within a 5 km radius of each other count as a single event
- Temporal filter (which events are ‘contemporaneous’):
 - 1 day: geographically co-located events reported within 1 day of each other count as a single event
 - 2 days: geographically co-located events reported within 2 days of each other count as a single event
- Dyad type:
 - A: directed (includes only events where initiator and target are both known)
 - B: undirected (all events, including those with some ambiguity over which actor was initiator vs. target)

NOTE: ACLED and GED contain only undirected dyad information. Most other sources include directed dyad information. Accordingly, type-A dyads exclude ACLED and GED from the integrated event counts.

In all, we offer eight different sets of integrated, multiple-source data:

- 1 km, 1 day, dyad type A (MELTT1km1dA)

- 1 km, 1 day, dyad type B (MELTT1km1dB)
- 5 km, 1 day, dyad type A (MELTT5km1dA)
- 5 km, 1 day, dyad type B (MELTT5km1dB)
- 1 km, 2 days, dyad type A (MELTT1km2dA)
- 1 km, 2 days, dyad type B (MELTT1km2dB)
- 5 km, 2 days, dyad type A (MELTT5km2dA)
- 5 km, 2 days, dyad type B (MELTT5km2dB)

Of these, 1km1d has the most stringent standard for duplicates (resulting in more unique events), and 5km2d has the loosest (resulting fewer unique events).

8 Units of Analysis

8.1 Panel data

xSub panel datasets are available at multiple levels of analysis, which users can customize to their needs. The spatio-temporal resolution can thus range from macro-level (e.g. country-year) to meso-level (e.g. province-month) and micro-level (e.g. grid-week).

Spatial units:

- **country** [adm0]: country or national level
- **province** [adm1]: 1st order administrative division (e.g. U.S. state)
- **district** [adm2]: 2nd order administrative division (e.g. U.S. county)

- `grid cell [priogrid]`: 0.5 x 0.5 decimal degree regular grid (PRIO-GRID)
- `electoral constituency [clea]`: geographic units used by the Constituency-Level Elections Archive (CLEA)

Temporal units:

- `year`
- `month`
- `week`
- `day` (not available for `adm2` or `priogrid`, due to file size)

Output datasets feature violent event counts and local demographic, geographic, ethnic and weather variables, aggregated to the user’s preferred units. For example, if the user selects “Space: district” and “Time: week”, the dataset will include repeated weekly observations for each district, with the total number of violent incidents at each time period (broken down by actor and tactics), and local average statistics for weather and other covariates.

8.2 Event-level data

In addition to panel data, **xSub** also provides the underlying event-level data for each data source and country, including the eight MELTT multiple-source datasets. For consistency, the events are preprocessed to conform with xSub’s standard event typology (Sections 9.2 and 9.3 below), and contain geographic and temporal precision codes (`GEOPRECISION` and `TIMEPRECISION`), to allow users to construct their own aggregate datasets, or to analyze the events in raw form.

9 Variables Included

xSub datasets include variables from two categories:

1. conflict and violence
2. local demographics, geography, ethnicity, weather

9.1 ID variables

The following variables identify spatial and temporal units, and can be used for merging and aggregation:

 - year

9.2 Event counts: conflict and political violence

ACTORS

- **SIDE_A**: incumbent government, pro-govt militia, third party acting on incumbent's behalf
- **SIDE_B**: rebels, anti-government militia, third party acting on rebels' behalf, and other armed groups directly challenging the government
- **SIDE_C**: civilians
- **SIDE_D**: local militia, tribe, other non-state actors *not* directly challenging the government

The **actor dictionary** specifies which factions belong to **SIDE_A** . . . **SIDE_D** for each conflict.

- **INITIATOR** variables:
 - **INITIATOR_SIDEA**, **INITIATOR_SIDEB**, **INITIATOR_SIDE_C**, **INITIATOR_SIDE_D**

NOTE: ACLED and GED do not explicitly distinguish between the initiators and targets of conflict events. In those cases (*undirected dyads*), the variables **INITIATOR_*** and **TARGET_*** are to be interpreted as “participant 1” and “participant 2,” respectively. In all other cases (*directed dyads*), the “initiator” and “target” labels apply as written.

- **TARGET** variables:
 - **TARGET_SIDEA**, **TARGET_SIDEB**, **TARGET_SIDE_C**, **TARGET_SIDE_D**

NOTE: ACLED and GED do not explicitly distinguish between the initiators and targets of conflict events. In those cases (*undirected dyads*), the variables **INITIATOR_*** and **TARGET_*** are to be interpreted as “participant 1” and “participant 2,” respectively. In all other cases (*directed dyads*), the “initiator” and “target” labels apply as written.

- **ACTION** variables:
 - **ACTION_ANY**, **ACTION_IND**, **ACTION_DIR**, **ACTION_PRT**

- **INITIATOR_ACTION** variables:
 - **SIDEA_ANY**, **SIDEA_IND**, **SIDEA_DIR**, **SIDEA_PRT**
SIDEB_ANY, **SIDEB_IND**, **SIDEB_DIR**, **SIDEB_PRT**
SIDEC_ANY, **SIDEC_IND**, **SIDEC_DIR**, **SIDEC_PRT**

NOTE: ACLED and GED do not explicitly distinguish between the initiators and targets of conflict events. In those cases (*undirected dyads*), the **INITIATOR_ACTION** variables are to be interpreted as “tactics used in event involving participant 1.” In all other cases (*directed dyads*), the proper interpretation is “tactics used by event initiator.”

DYAD

- DYAD_X.Y: interaction between actors X and Y

NOTE: ACLED and GED do not explicitly distinguish between the initiators and targets of conflict events. In those cases (*undirected dyads*), the variables DYAD_* are to be interpreted as “event involving actors X and Y.” In all other cases (*directed dyads*), they are to be interpreted as “action by actor X against actor Y.”
